

Practice FRQ for Midterm – Grade Rubric

Time is an important variable in many psychological concepts. Describe a **SPECIFIC EXAMPLE** that clearly demonstrates an understanding of each of the following concepts and how it relates to or is affected by time. Use a different example for each concept.

- Fluid intelligence
- James-Lange theory of emotion
- Presentation of the conditioned stimulus (CS) and unconditional (UCS) in classical conditioning
- Refractory period in neural firing
- Sound localization
- Spontaneous recovery
- REM Rebound
- Retroactive interference
- Language development
- Flynn Effect

	<u>Peer Score</u>	<u>Score</u>
Provide a specific example which illustrates the concept of fluid intelligence and time	_____/1	_____/1
Provide a specific example which illustrates the concept of James-Lange Theory and time	_____/1	_____/1
Provide a specific example which illustrates the concept of CS & UCS and time	_____/1	_____/1
Provide a specific example which illustrates the concept of refractory period and time	_____/1	_____/1
Provide a specific example which illustrates the concept of sound localization and time	_____/1	_____/1
Provide a specific example which illustrates the concept of spontaneous recovery and time	_____/1	_____/1
Provide a specific example which illustrates the concept of REM rebound and time	_____/1	_____/1
Provide a specific example which illustrates the concept of retroactive interference and time	_____/1	_____/1
Provide a specific example which illustrates the concept of language development and time	_____/1	_____/1
Provide a specific example which illustrates the concept of Flynn Effect and time	_____/1	_____/1
Total floater points	_____/2	_____/2
Total for FRQ	_____/10	_____/10
Grade	_____/40	_____/40
