

**Practice FRQ – Grade Sheet**

Heidi’s older brother has suffered from chronic depression for several years. Unfortunately, her parents have incorrectly informed Heidi that there is a 40% chance that she will also suffer from depression. Explain using a specific example of how each term might lead Heidi to conclude that she will definitely be a victim of severe depressive disorder.

- Classical conditioning
- Positive Reinforcement
- Negative Reinforcement
- Heuristics
- Framing
- Confirmation bias
- Mental set
- Memory construction

	<u>Peer Score</u>	<u>Score</u>
Present a specific example that would explain how <b>classical conditioning</b> would lead to Heidi’s conclusion that she was depressed	_____/1	_____/1
Present a specific example that would explain how <b>positive reinforcement</b> would lead to Heidi’s conclusion that she was depressed	_____/1	_____/1
Present a specific example that would explain how <b>negative reinforcement</b> would lead to Heidi’s conclusion that she was depressed	_____/1	_____/1
Present a specific example that would explain how <b>heuristics</b> would lead to Heidi’s conclusion that she was depressed	_____/1	_____/1
Present a specific example that would explain how <b>framing</b> would lead to Heidi’s conclusion that she was depressed	_____/1	_____/1
Present a specific example that would explain how <b>confirmation bias</b> would lead to Heidi’s conclusion that she was depressed	_____/1	_____/1
Present a specific example that would explain how <b>mental set</b> would lead to Heidi’s conclusion that she was depressed	_____/1	_____/1
Present a specific example that would explain how <b>memory construction</b> would lead to Heidi’s conclusion that she was depressed	_____/1	_____/1
ICE Format	_____/1	_____/1
Total floater point	_____/1	_____/1
Total for FRQ	_____/9	_____/9
Grade	_____/40	_____/40
